

Can you easily retrieve your information from your JD Edwards ERP system? With this simple Plug-in BI solution for Oracle JD Edwards, we offer you one single Cloud platform for all your reporting & analytics needs.

Organizations today struggle to obtain actionable information from their multiple data sources. Accessing and consolidating this data is complex and time-consuming. By using our Plug-In BI solution and our accelerated implementation approach, your BI environment will be up and running in weeks rather than months. Available whenever and wherever you need it, with just one version of the truth!

Easy BI in the Cloud

Oracle BI Cloud Service (BICS) for Oracle JD Edwards gives you easy, affordable analytics in the cloud; so you can convert data into insight as fast as you can click. It includes interactive dashboards, ad-hoc queries, mobile analyses and reports to better manage your organization. The Oracle Cloud means infrastructure, maintenance, and upgrades are handled for you but your organization can also control updates. This enterprise-class solution delivered with reliability and simplicity helps reduce the burden on IT while streamlining your operations so that you can focus on your business.

Key Benefits

- ✓ Only solution that is fully integrated with Oracle JD Edwards
- ✓ Reliable and timely data
- ✓ Easy & Fast at low cost
- ✓ Reduced burden on IT
- ✓ Mobile

Seamless integration with Oracle JD Edwards

As a JD Edwards user, immediately take advantage of Oracle BICS - through seamless integration. Part of this integration is Extract Transformation Load (ETL) and data modelling. 'Facts', 'Dimensions' and 'Views' are defined to obtain meaningful information for reports, analyses and dashboards. By taking away this complexity we leave you more time to define your reporting and dashboards needs.

Redfaire International offers a BICS 'accelerate' solution for JD Edwards that includes:

- Seamless integration with JDE modules (GL, AR, AP, Sales, Revenue, Forecasting, Procurement, Inventory and Manufacturing)
- Star Schemas
- Generic Dimensions (Time, Product, Company, etc.)
- Hierarchies
- Base and derived facts (Revenue, Cost of Goods Sold, Margin)
- Data is pulled out of JD Edwards (on premise or hosted) and stored in a data warehouse in the Cloud
